Practical-4

Deploy the Machine Learning Model using Flask and Docker.

Task 1: Install the required libraries

```
    pip install Flask
pip install gunicorn
```

Task 2: Follow the steps described in theory material to deploy the model using Flask. Run the flask application to execute the deployed model.

Flask Code :

```python
from flask import Flask, jsonify, request
from your_model import predict  # Import your model's prediction function

app = Flask(__name__)

@app.route('/predict', methods=['POST'])
def prediction():     data =
request.get_json(force=True)
   result = predict(data)  # Use your model to make predictions
return jsonify(result)

if __name__ == '__main__':
   app.run(port=5000)
```

Task 3: Create the docker file using the steps described in theory material.

Docker File Code :

```dockerfile
FROM python:3.8-slim
WORKDIR /app
COPY . /app
RUN pip install --trusted-host pypi.python.org -r requirements.txt
EXPOSE 80
ENV NAME World
CMD ["python", "app.py"]
```

Task 4 : Create the Docker Image

docker build -t dockerfile .

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .
[+] Building 25.5s (9/9) FINISHED
 => [internal] load .dockerignore
 => => transferring context: 2B
 => [internal] load build definition from dockerfile
```

Task 5 : Create the Docker File

```
What's Next?
   View summary of image vulnerabilities and recommendations → docker scout quickview
PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile
```

Task 6 : Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
REPOSITORY      TAG       IMAGE ID        CREATED          SIZE
dockerfile      latest    ee193e6cc1a7    2 minutes ago    509MB
hello-world     latest    9c7a54a9a43c    6 months ago     13.3kB
```

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
CONTAINER ID   NAME               CPU %   MEM USAGE / LIMIT   MEM %    NET I/O    BLOCK I/O   PIDS
785e4a62c222   quizzical_bardeen  0.00%   0B / 0B             0.00%    0B / 0B    0B / 0B     0
```

Task 7 : Hands-on on docker commands:

1. docker pull ubuntu:latest

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker pull ubuntu:latest
latest: Pulling from library/ubuntu
aece8493d397: Downloading [=============================================>     ]  26.84MB/29.54MB
```

2. docker ps

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps
CONTAINER ID    IMAGE      COMMAND      CREATED     STATUS      PORTS       NAMES
```

3. docker ps -a

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps -a
CONTAINER ID   IMAGE                COMMAND          CREATED        STATUS                  PORTS    NAMES
785e4a62c222   dockerfile           "python app.py"  7 minutes ago  Exited (0) 7 minutes ago         quizzical_bardeen
523f21a1dd21   dockerfile           "python app.py"  8 minutes ago  Exited (0) 8 minutes ago         xenodochial_moser
98032478cfe5   hello-world:latest   "/hello"         2 months ago   Exited (0) 25 minutes ago        mystifying_fermi
```

4. docker inspect container_name or id

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker inspect 785e4a62c222
